# ARRHYTHMIA PROJECT

SERVER MANUAL

Disorganised electrical signals

Jaime Prats

Jaime Soler

Ángel de la Nava

María Rueda

Run the server:

First aff all, some advices:

- The person running the program should have downloaded JDK.
- The person running the program should have downloaded SQLite.

Once the server starts running, it will appear in console the steps to follow if you want to close the connection.

```
run:
If you want to close the  server press 'x':
```

It will remain open until the client writes an 'x' through console. It will wait constantly for new clients to connect.

Keep in mind that, to run this program, you will need to manually insert the .jar that are saved in the folder called 'library'.
